

Frame. Events Handling. Action Events

Problem 1.

Write a program to compute and show the sum that a client should pay if he buys tickets to a spectacle. We assume the people with age between 7 and 14 pay half cost of a ticket and the children have free of charge tickets. The graphic interface is:

Age category	Number of people
<input type="checkbox"/> $7 \leq x \leq 14$	<input type="text"/>
<input type="checkbox"/> $x = 14$	<input type="text"/>

Compute
